Tools	SQL Server 2017, Git, GitHub, Team Foundation Server (TFS), Chrome Dev Tools, Agile/Scrum
Other	Fluent Armenian

Experience

Full Stack .NET Developer

1/2018 - 6/2018

Recruit Hub Sports

- Worked closely with a small team on creating RecruitHub, a social online platform which eases the process for high school athletes to be discovered by recruiting coaches.
- Implemented the site's AWS S3 upload functionality which comprised of both the Web API controller as well as the back-end database code used to manage user-uploaded content.
- Built the site-wide tagging system, which allows users to add personalized tags to other users and posts on the site, including the ability to make tags public or private.
- Created numerous reusable React components including one which allowed other developers to implement bookmarking functionality within their own components, therefore speeding up their development processes.
- Built several of the site's data entry and editing forms, including validation logic, which consisted of React components, Web API controllers, and services in the site's data access layer.
- Technologies utilized include React 16 and ES6 for the client side, ASP.NET Web API on the server side, and SQL Server database.

E-Commerce Store Owner

2012 – 2017

Allan's Game Emporium

- Managed inventory and sales of a variety of goods ranging from vintage items to electronics, steadily increasing in volume and revenue 15% annually between 2012 to 2017.
- Provided excellent personalized customer service which contributed to customer satisfaction and overall sales.

Projects

Travel buddy (LA Automobility hackathon)

- Created an app that runs on General Motor's in-vehicle display marketed for rental cars and tourists. Travel Buddy utilizes GM's vehicle APIs for navigation and landmarks as well as Visa's APIs such as checkout and currency exchange. The app provides a rich experience in unfamiliar locations by displaying a variety of local options sorted by ratings, cost, and time allotment needed.

Mugicians

- A single page application built with JavaScript and React, C# ASP.NET, and SQL Server hosted on Azure. Mugicians is a collaborative music hosting and editing website that makes organizing songs along with their lyrics, notes, and audio files intuitively easy as well as a community experience.
